### ### The BEER Brewing Process

The method of BEER making involves a sequence of carefully regulated steps. First, grains, commonly barley, are germinated to activate enzymes that convert the starch into usable sugars. This germinated grain is then mixed with hot water in a technique called mixing, which removes the sugars. The resulting solution, known as extract, is then heated with hops to add aroma and stability.

After boiling, the extract is cooled and introduced with yeast. The yeast transforms the sugars into spirit and gas. This fermentation takes many days, and the produced beer is then conditioned, purified, and packaged for distribution.
